

Flexible and individual house packages are transformed into Lappli homes suited to every family

Building a house is one of the biggest projects in life, associated with many dreams and fantasies. Sometimes the house of your dreams can be found among predesigned models, sometimes it is created by customising a model to suit your own tastes. Some people think that a perfect house can only be built based on your own design. Lappli-Houses can implement all the above alternatives with you?safely, reliably, and with high-quality results. We know that realising your idea is possible: you can get the home you have always dreamt of.

Lappli-Houses has more than 30 years of experience in building houses. Due to our flexible house factory, an individual dream house can be implemented while sticking to the budget. The structural elements are prefabricated panel wall systems. As a result, the minimum number of joints are sealed at the site, and the house will be leak-proof and warm.
